09	User & Access Management
10	Common Manager Scenarios
11	Quick Reference Card

1

Introduction

The **Manager role** is the highest-privilege level in the Restaurant POS. It includes everything a Waiter or Cashier can do — opening tables, taking orders, processing payments, splitting bills — plus elevated actions such as voiding sent items, applying discounts beyond the standard threshold, editing the floor layout, managing reservations, and pulling reports.

Accessing the POS

Open any browser and navigate to:

```
http://[server]/desk/rpos
```

Log in with your **manager credentials** (username and password assigned in ERPNext). The interface will reflect your elevated permissions immediately on login.

- ❑ **Your credentials are personal.** Never share your username or password with waiting staff. All voids, discounts, and layout changes are recorded against your account for audit purposes.

SCREENSHOT PLACEHOLDER

Manager login screen at /desk/rpos showing the username and password fields, with the restaurant logo and a "Manager Access" indicator.

Waiter & Cashier Capabilities

As manager you have full access to all standard floor operations. The summary below is for reference; detailed instructions are covered in the Waiter and Cashier user guides.

COVERED IN DETAIL IN THE WAITER GUIDE

- Viewing the floor plan and table status (available, occupied, reserved)
- Opening a table, selecting covers, assigning a waiter
- Browsing the menu by category and adding items to an order
- Adding modifiers and special instructions to individual items
- Sending orders to the kitchen (KDS)
- Adding or removing items before and after sending
- Transferring a table or merging two tables

COVERED IN DETAIL IN THE CASHIER GUIDE

- Viewing the bill summary and applicable taxes
- Processing payment (cash, card, mixed)
- Splitting the bill by amount, by seat, or by items
- Printing or emailing receipts
- Closing a table after payment

i All cashier and waiter actions performed under a manager login are logged against the manager account. If a waiter uses your credentials, traceability is lost. Always log out before handing a terminal to floor staff.

3

Voiding a Sent Item

Once an order is sent to the kitchen, standard users cannot delete items. A guest may change their mind, an item may be out of stock, or a waiter may have sent the wrong item to the wrong table. In all these cases, a manager must perform a **void**.

⚠ A void permanently removes the item from the order and creates an immutable audit record. It does not refund a payment that has already been processed. If payment has been taken, a refund must be handled separately.

How to Void an Item

- 1 On the floor plan, tap the table with the item to be voided to open the Order Screen.
- 2 Locate the item in the order list. Sent, Cooking, and Ready items display a  **(void) button** to the right of the item name.
- 3 Tap the  button. The **Manager Void dialog** opens.
- 4 Enter **your own** manager username and password in the authentication fields. Do not enter the waiter's credentials.
- 5 Enter **reason** in the text field. This is a mandatory — the system will not allow submission without a reason. Choose a clear, specific reason (e.g. "Guest changed order after sending" or "Item 86'd").
- 6 Tap **Void Item**. The item is removed from the order immediately.

What Happens After a Void

- The item disappears from the Order Screen and bill total adjusts automatically.
- The KDS shows a **VOID** notification on the chip for that item so kitchen staff are aware.
- An audit log entry is created in ERPNext with your name, the item, reason, and timestamp.

SCREENSHOT PLACEHOLDER

Manager Void dialog open over the Order Screen, showing the authentication fields, reason text box, and the Void Item button highlighted in red.

SCREENSHOT PLACEHOLDER

KDS chip showing the VOID banner overlaid on an orange (Cooking) chip after a successful manager void.

4

Applying Discounts

Discounts can be applied to any open order before payment is finalised. Standard cashier staff can apply discounts up to the configured threshold (typically 10%). Only managers can apply discounts above this threshold or apply a fixed-amount discount.

How to Apply a Discount

- 1 Open the table's Order Screen and verify the order is correct before adding any discount.
- 2 Tap the **% Discount** button in the payment/bill area of the Order Screen.
- 3 Select the discount type:
 - 4 **Percentage** — enter a number between 1 and 100 (e.g. **15** for 15% off).
 - 5 **Fixed Amount** — enter the exact currency amount to deduct (e.g. **10.00**).
- 6 For discounts above the waiter threshold, a manager authentication prompt appears. Enter your manager credentials.
- 7 Optionally enter a reason (recommended for audit trail).
- 8 Tap **Apply Discount** . The bill total recalculates immediately.

Discount Audit

All applied discounts are automatically logged against the order record. You can review them in:

- **ERPNext → Restaurant POS → POS Order** — open any order and scroll to the Discounts section.
- **Sales Analytics** — filter by discount type to see aggregated discount impact over a date range.

Discounts cannot be removed once a payment has been processed. Double-check the discount amount before completing the transaction.

SCREENSHOT PLACEHOLDER

The Discount dialog showing the Percentage and Fixed Amount toggle, an input field with "15" entered, and the Apply Discount confirmation button.

5

Editing the Floor Layout

The floor plan is a live representation of your dining room. You can reposition tables, add new tables, and adjust their properties directly from the POS interface without going into the ERPNext back office.

Do not edit the floor during active service. Layout changes take effect immediately for all logged-in staff. Moving a table that has an open order can confuse floor staff. Schedule layout edits during quiet periods.

Entering Edit Mode

- 1 From the main floor plan view, tap  in the top-right header. The floor switches to **Edit Floor** edit mode — tables gain a drag handle and the toolbar updates.
- 2 All tables are now draggable. Press and hold a table, then drag it to its new position on the grid.

Adding a New Table

- 1 In edit mode, tap **+ Add Table**.
- 2 A properties panel opens. Fill in:
 - 3 **Table Number** — a unique identifier (e.g. **T-15**).
 - 4 **Capacity** — maximum number of covers.
 - 5 **Shape** — Square or Round (affects how the table renders on the floor plan).
- 6 Tap **Add**. The new table appears in the top-left corner of the grid.
- 7 Drag it to the correct position in the dining room.

Saving or Discarding Changes

- Tap  **Save Layout** to commit all changes. Staff on other terminals will see the updated layout within seconds.
- Tap **Cancel** to discard all changes made in this edit session and return the layout to its previous state.

SCREENSHOT PLACEHOLDER

Floor plan in edit mode showing a table mid-drag, the Add Table button in the toolbar, and the Save Layout / Cancel buttons highlighted.

6

Managing Floors (Back Office)

For deeper floor configuration — creating a brand-new floor, changing the grid dimensions, or setting a background colour or image — use the ERPNext back office rather than the live POS interface.

Navigating to POS Floor

- 1 Log in to ERPNext at `http://[server]/desk` using your manager credentials.

- 2 Go to **ERPNext → Restaurant POS → POS Floor**.

- 3 You will see a list of all configured floors (e.g. Ground Floor, Terrace, Private Dining).

Creating a New Floor

- 1 Click **+ New** in the POS Floor list view.

- 2 Fill in the **Floor Name** (e.g. Rooftop Terrace).

- 3 Set the **Background Colour** or upload a floor plan image.

- 4 Set **Grid Size** to determine how many grid squares the floor plan uses.

- 5 Click **Save**.

Assigning Tables to Floors

Individual tables are managed in the **POS Table** doctype (**Restaurant POS → POS Table**). Each table record has a Floor field. Set it to the correct floor name and save.

- i** After creating a new floor and assigning tables, refresh the POS on all terminals so the new floor appears in the floor switcher at the top of the POS screen.

7 Reservation Management

The Reservations module gives you full control over bookings — creating, modifying, cancelling, and seating guests. Access it directly from the POS header.

Viewing All Reservations

From the main POS screen, tap  **Reservations** in the header. A list view opens showing all upcoming reservations sorted by date and time, with status indicators (Confirmed, Seated, Cancelled, No-Show).

Creating a New Reservation

- 1** In the Reservations view, tap **+ New Reservation** .
-

- 2 Fill in the booking details:
- 3 **Guest Name** — full name of the primary contact.
- 4 **Phone Number** — for confirmation and reminder messages.
- 5 **Covers** — number of guests expected.
- 6 **Table** — select from available tables for that time slot.
- 7 **Date & Time** — reservation date and arrival time.
- 8 **Source** — how the booking was made (Walk-in, Phone, Online, Third-party).
- 9 Tap **Save** . The table is immediately marked as Reserved on the floor plan (shown in blue).
- Reservation**

Cancelling a Reservation

- 1 Find the reservation in the list view or by tapping the reserved table on the floor plan.
- 2 Tap **Cancel Reservation** .
- 3 A confirmation prompt appears — tap **Confirm** . The table status reverts to Available.
- Cancel**

Seating a Reserved Guest

- 1 When the guest arrives, tap the reserved table (blue) on the floor plan.

2

Tap **Seat Guest**. The table switches from Reserved to Occupied and an order session opens.

Auto-Release Rules

- The system alerts you after **60 minutes** of no-show (no guest seated for a confirmed reservation).
- After **90 minutes** of no-show the reservation is automatically cancelled and the table released.
- Both events are logged in the reservation record for reporting purposes.

SCREENSHOT PLACEHOLDER

Reservations list view showing a mix of Confirmed, Seated, and Cancelled bookings, with the + New Reservation button visible in the top-right.

SCREENSHOT PLACEHOLDER

New Reservation form with all fields filled in and the table selector dropdown open showing available tables.

Reports & Analytics

All financial and operational reporting is handled through the standard ERPNext reporting suite. Access these reports via the ERPNext desk ([http://\[server\]/desk](http://[server]/desk)) using your manager credentials.

REPORT	LOCATION IN ERPNEXT	PURPOSE
Sales Analytics	Accounts → Sales Analytics	Daily, weekly, and monthly revenue by item, category, table, or waiter
Stock Ledger	Stock → Stock Ledger	Item-level stock movement; identify consumption patterns and shrinkage
Profit & Loss Statement	Accounts → Profit and Loss Statement	Full P&L for any period; compare against budget
Customer Acquisition	CRM → Customer Acquisition	Reservation source breakdown; track online vs. walk-in vs. phone bookings
Void Log	Restaurant POS → Void Log	All void events with reason, manager, time, and item detail
Discount Report	Restaurant POS → Discount Report	All discounts applied, by amount and percentage, grouped by date or staff

 **Tip:** Filter all reports by Company "**Admin (Demo)**" for clean demo results that exclude test transactions. Switch to your live company name for production reporting.

SCREENSHOT PLACEHOLDER

Sales Analytics report filtered to the current month, grouped by menu category, showing a bar chart summary and a detailed table below.

User & Access Management

Staff access is controlled through ERPNext's standard user management system. Navigate to **ERPNext** → **Settings** → **User** to manage all system users.

Available Roles

POS Manager

- All POS actions
- Void items
- High-value discounts
- Floor editing
- Reports access
- User management

POS Cashier

- All waiter actions
- Process payments
- Split bills
- Standard discounts (threshold)
- Print receipts

Kitchen Staff

- KDS view only
- Advance chip status
- No order creation
- No payment access

Adding a New Staff Member

- 1 Go to **Settings** → **User** → **+ New** . Fill in the staff member's full name, email address, and a temporary password.

- 2 In **Roles** table, add the appropriate role (POS Manager, POS Cashier, or Kitchen Staff). Save.
- 3 Go to **Human Resources → Employee → + New**. Fill in the employee record and **User** field. link it to the User created above **ID** Save. using the
- 4 The staff member can now log in. Ask them to change their password on first login.

Deactivating a User

Open the User record and tick **Disabled**, then save. The user will be logged out immediately and unable to log back in. Their historical records are preserved.

⚠ Never delete a User record for a departed staff member. Deleting a user can orphan historical records and break audit trails. Always **disable** rather than delete.

SCREENSHOT PLACEHOLDER

ERPNext User form with the Roles table open, showing "POS Cashier" being added from the role selector dropdown.

Common Manager Scenarios

The situations below are the most frequently escalated issues during service. Review them to be prepared.

Q A waiter accidentally sent the wrong items for two different tables

Step 1 — Notify the kitchen immediately so they can hold preparation on any items not yet started.

Step 2 — Void the incorrect items on both tables using the Manager Void dialog (Section 3). Use reason "Sent to wrong table".

Step 3 — Re-send the correct items from each table's Order Screen. The kitchen will receive fresh tickets with updated table numbers.

Step 4 — Check with the kitchen whether any voided items are already being cooked. If so, those items may still be served with a waiter's manual instruction, or discarded — your call based on food safety and waste policy.

Q End-of-day cash reconciliation

1. From the POS, tap **Close Shift** (or **End of Day**) in the top-right menu.
2. Count the physical cash in the till. Enter the counted amount in the Closing Amount field.
3. The system compares counted amount against expected (opening float + cash sales). Any discrepancy is flagged.
4. Save and print the End-of-Day summary. File it with your daily paperwork.
5. Deposit surplus cash in the safe and set the opening float for the next shift.

Q Adding a new seasonal item to the menu

1. Go to **ERPNext → Restaurant POS → POS Menu Item → + New**.

2. Enter the item name, description, price, and food category.
3. Assign the **KDS Station** (e.g. Grill, Desserts) so it routes to the correct kitchen column.
4. Upload an image (optional but recommended for visual menus).
5. Set **Available** to Yes and save.
6. The item appears on the POS menu immediately. Refresh POS terminals if it does not appear within 60 seconds.

Closing a floor for a private event

1. Ensure all open orders on the floor are closed and paid before making changes.
2. Go to **ERPNext** → **Restaurant POS** → **POS Floor** and open the relevant floor record.
3. Set the **Status** field to Closed and add a note in the Closure Reason field (e.g. "Private event 18:00-23:00").
4. Save. The floor will no longer appear in the POS floor selector for standard staff.
5. To reopen, return to the same record and set Status back to Active.

SCREENSHOT PLACEHOLDER

End-of-Day summary screen showing opening float, cash sales total, expected closing balance, counted balance, and a variance indicator.

⚡ QUICK REFERENCE CARD

MANAGER POS URL

http://[server]/desk/rpos

VOIDING A SENT ITEM

- Order Screen →  button
- Enter your credentials
- Enter reason → Void Item

EDIT FLOOR LAYOUT

- POS →  Edit Floor (top-right)
- Drag tables to reposition
-  Save Layout to commit

KEY ROLES

- POS Manager
- POS Cashier
- Kitchen Staff

ERPNext BACK OFFICE

http://[server]/desk

APPLYING A DISCOUNT

- Order Screen → % Discount
- Choose Percentage or Fixed
- Manager auth for above-threshold

RESERVATION NO-SHOW RULES

- Alert at 60 min
- Auto-cancel at 90 min

REPORT TIP

Filter by Company "Admin (Demo)" for clean demo data
